EDUCATION

Johnson & Wales University

BS Network Engineering

Providence, RI

Cum Laude 3.41 GPA, 10/08

Ella T. Grasso South Eastern Tech

Electronics Career Certificate

Groton, CT

Graduated, 06/04

SKILLS

Extensive work with Juniper Netscreen, Cisco Pix, and Checkpoint firewalls

- Extensive work with Wireshark, the nmap protocol, TCP/IP protocols, and various other network applications
- Knowledgeable using BackTrack, a linux distribution, for auditing network security
- Custom built, widely deployable Windows XP installations
- Extensive work with Windows 98SE, Windows 2000, Windows XP, and Windows Vista
- Mac OSX knowledge including basic shell usage
- Exceptional organizational skills
- Eager to learn new technologies

EMPLOYMENT EXPERIENCE

VeriSign

Security Analyst I

Providence, RI

03/17/08 – Present

Assisted in the implementation of firewall diagnosing and security policy implementations. Assisted in firewall management of various Fortune 500 companies, utility providers, and various other companies/corporations. Resolved issues from customers using the VeriSign remedy ticket system. Worked with many of the technologies used in the networking field such as VPNs, Cisco Pix firewalls, Proventia firewalls, etc.

Market Source

Hewlett-Packard Sales Representative

Warwick, RI

07/01/06 – 04/06/08

Worked at various retail stores in Massachusetts and Rhode Island, teaching retail sales employees about the various technologies related to Hewlett Packard. Was involved in the basic marketing and setup of products around the retail stores. Communicated with potential customers about the new technologies including setup and installation, upcoming product releases, and features of the current technologies.

St. Joseph School

Network Implementation Volunteer

N. Grosvenoredale, CT

10/26/07

Helped with the installation and design of a network with 50+ computers over two floors. Myself and 12 others created and ran Ethernet cable to each of the classroom. We redesigned the failing network to contain more than 1 collision domain rather than the one the school was originally using. The redesigned network was created to give all computers access to a DHCP server, the internet, and printers while providing error free point-to-point communications throughout the entire building.
